

Katja Taxis is Professor of Pharmacotherapy and Clinical Pharmacy at the University of Groningen in the Netherlands. Her research line focuses on how to use approved medicines in the most optimal way in the real world and how pharmacists can contribute to this. The target are populations who are most vulnerable to harmful effects of medicines including frail older individuals with multi-morbidities and polypharmacy, important in an ageing society, and patients with hepatic impairment. Her research contributes to the worldwide transition of the role of the pharmacist from preparing and dispensing medicines to being a health care professional, providing personalized medicine to patients. A number of projects are performed in low- and middle income countries (Ethiopia, Vietnam, Indonesia) expanding the work to a global health context. She has been a member of EuroDURG for many years and has been elected as chair of EuroDURG for the period 2020-2022.
