

Dr Li-Chia Chen is a Senior Lecturer in Pharmacoepidemiology, Division of Pharmacy and Optometry at the University of Manchester. Dr Chen has a hospital pharmacy background, and her research expertise is in evidence-based medicine, pharmacoepidemiology, drug utilisation research, health economic evaluation and health service research. Her current research focus on optimising the use of opioids for chronic non-cancer pain management, and the adherence, effectiveness and cost-effectiveness of long-term breast cancer therapeutics. She is currently leading the Global Opioid Utilisation Research theme at the Drug Utilisation Research and Health Service Research Special Interest Group at the International Society of Pharmacoepidemiology. She is also leading the collaborations between the University of Manchester and other Chinese institutions in the pharmacy capacity building programme.
